* No Special Flood Hazard Areas Identified

Federal Emergency Management Agency

FLOOD INSURANCE STUDY NUMBER
42091CV007B
REVISED: MARCH 2, 2016

NOTICE TO
FLOOD INSURANCE STUDY USERS

Communities participating in the National Flood Insurance Program have established repositories of flood hazard data for floodplain management and flood insurance purposes. This Flood Insurance Study (FIS) may not contain all data available within the repository. It is advisable to contact the community repository for any additional data.

Part or all of this FIS may be revised and republished at any time. In addition, part of this FIS may be revised by the Letter of Map Revision process, which does not involve republication or redistribution of the FIS. It is, therefore, the responsibility of the user to consult with community officials and to check the community repository to obtain the most current FIS components.

ATTENTION: On FIRM panel 0382G, the Cheltenham Levee has not been demonstrated by the community or levee owner(s) to meet the requirements of Section 65.10 of the NFIP regulations in 44 CFR as it relates to the levee's capacity to provide 1% annual chance flood protection. The subject areas are identified on FIRM panels (with notes and bounding lines) and in the FIS report as potential areas of flood hazard data changes based on further review.

FEMA has updated levee analysis and mapping protocols. Until such time as FEMA is able to initiate a new flood risk project to apply the new protocols, the flood hazard information on the aforementioned FIRM panel that is affected by the Cheltenham Levee is being added as a snapshot of the prior effective information presented on the FIRMs and FIS reports dated December 19, 1996. As indicated above, it is expected that affected flood hazard data within the subject area could be significantly revised. This may result in floodplain boundary changes, 1% annual chance flood elevation changes, and/or changes to flood hazard zone designations.

The effective FIRM panels (and the FIS) will again be revised to update the flood hazard information associated with the Cheltenham Levee when FEMA is able to initiate and complete a new flood risk project to apply the new protocols.

Initial Countywide FIS Effective Date: December 19, 1996

Revised Countywide FIS Date:

March 2, 1998 – to change base flood elevations, floodway, and special flood hazard areas.

April 21, 1999 – to correct the elevation of Elevation Reference Mark.

August 9, 1999 – to add base flood elevations, special flood hazard areas, and roads and road names; to change special flood hazard areas and zone designations; to reflect updated topographic information; and to incorporate previously issued Letters of Map Revision.

October 19, 2001 – to change base flood elevations and special flood hazard areas.

March 2, 2016 – to add, change and delete Special Flood Hazard Areas; to reflect updated topographic information; to change, add Base Flood Elevations; and to incorporate previously issued Letters of Map Revision.
